L O O P

## Loop

Loop is a contemporary interpretation of lighting art that invites to create spaces with shapes and light, both in unitary and group installation. Loop gives every space a distinct identity, transforming the concept of indoor lighting by offering freedom to the spatial creation of forms and light.

Antoni Arola design for Simon

## Versatile

The 360° orientation allows light to be directed in numerous directions, with many configuration possibilities. Depending on the desired mood, Loop can illuminate specific areas, directing light evenly and regularly, or distribute it across the surface of a space, where the balance between light and aesthetics enables creative value.

## Organic light

Loop is a luminaire with a minimum thickness and a design of elegant lines.

Loop is the solution for the decorating and lighting of hotels, residential and corporate spaces, as well as formal and artistic installations through its compositional versatility.

## Visual comfort

Loop is soft light, which has a strong contrast with its shadow. Loop creates lighting effects on the wall and allows it to be rotated in any direction getting multiple visual combinations.

# Compositions

Loop is a combination of art that can offer a lot of possibilities to not only lighting the space, also offers good alternative to have a perfect decoration of your space.

## Loop X-less

X-less is an installation system for total integration in walls, turning them into light substance that offers creative freedom in lighting projects.

### Solid system - perfect light

The trimless X-Less system offers a solid connection between the luminaire and the wall in a complete integration that ensures its stability even when attaching adjustable models. Maximum light quality on a uniform surface and without imperfections.

### Easy and quick installation

The installation process is simpler than in the conventional frameless formats, where more complex building work is required as well as additional plastering. X-Less allows for the pre-frames to be attached quickly, in just a few minutes, and to finish the operation by just applying a thin layer of leveling paste.
